Functional Block Diagram

General Description

The TriQuint TGV2529-SM is a monolithic voltage controlled oscillator (VCO) designed to operate at frequencies that target the Point to Point, VSAT, and millimeter-wave communication markets.

The TGV2529-SM is manufactured on TriQuint's GaAs InGaP production process and typically provides 7 dBm output power at 13GHz with a -110dBc/Hz phase noise at 100 KHz offset. A divide-by-2 output is provided for the PLL function.

Lead-free and RoHS compliant.

Evaluation Boards are available upon request.
