

Product Description

The QM12112 is a low loss, high isolation SPDT switch with performance optimized for GSM, CDMA, WCDMA, & LTE applications requiring high linearity and high power handling. The QM12112 is controlled by 1 bit GPIO in a compact 0.7mm x 1.1mm, 6-pin module, which allows for a small solution size with no need for external DC blocking capacitors (when no external DC is applied to the device ports).

Power On and Off Sequence

It is very important that the user adheres to the correct power-on/off sequence in order to avoid damaging the part. First apply V_{DD} before applying a high to CTRL.

Power On –

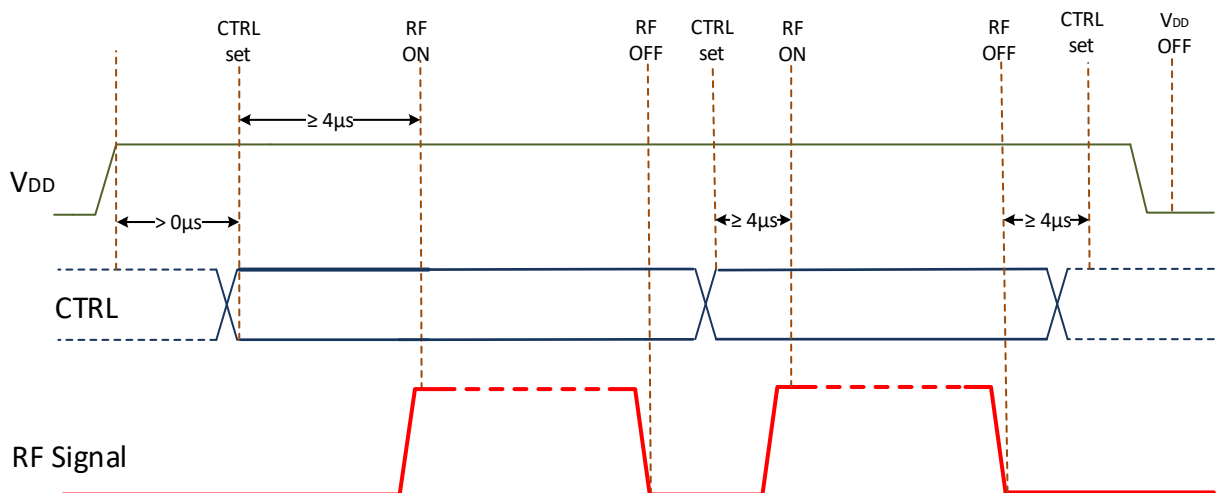

1. Apply voltage supply – V_{DD}
2. Apply logic signal – CTRL
3. Wait $4\mu s$ or greater after CTRL is stable and then apply the RF signal

Switching Ports –

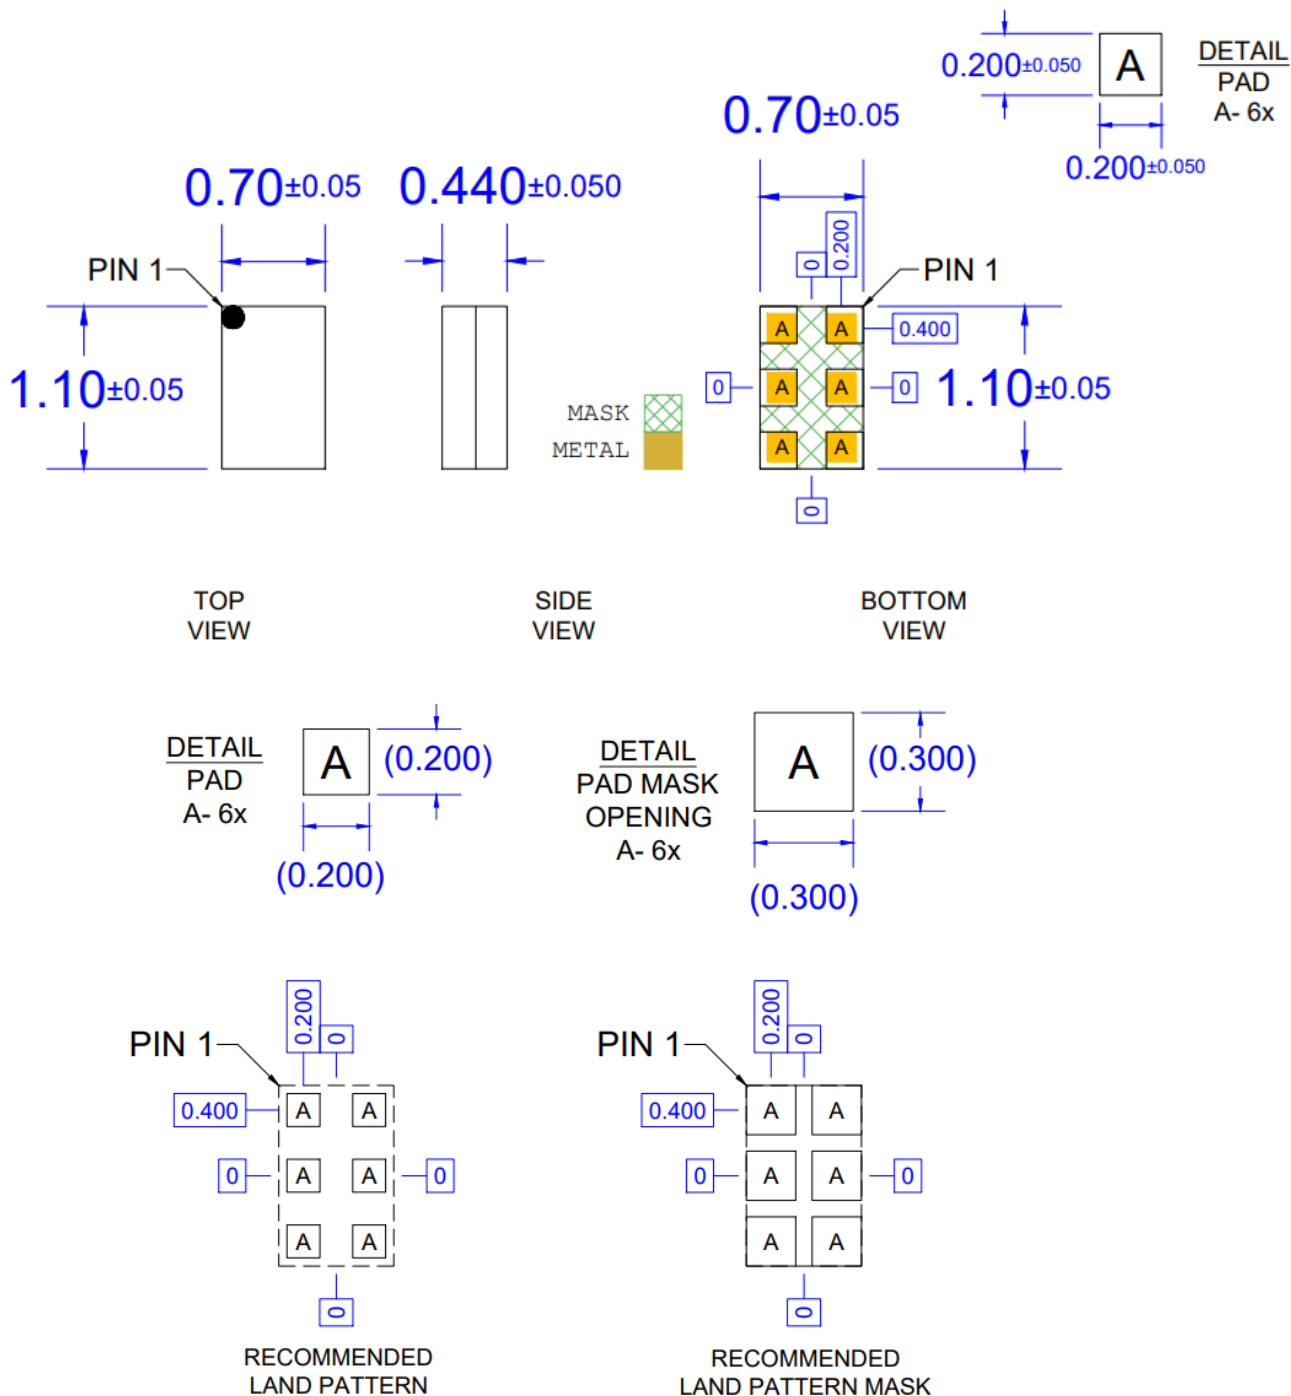

1. Remove the RF Signal
2. Change logic signal – CTRL
3. Wait $4\mu s$ or greater after CTRL is stable and then apply the RF signal

Power Off –

1. Remove the RF signal
2. Wait $4\mu s$ or greater and remove the logic signal – CTRL
3. Remove the voltage supply – V_{DD}
